Middletown, Pa. 17057  
To Whom It May Concern,

It is unfortunate that nothing is being done to reactivate TMI Unit #1 to replace the loss of power caused by the damage to TMI Unit #2. Since Unit #1 was left undamaged and is capable of supplying enough power to offset the loss of Unit #2, why is nothing being done to use this reactor that is in operable condition? Without the use of both Unit #1, and Unit #2, G.P.U. is forced to buy power outside its own plants, thereby sustaining great losses. Is this situation to continue unsolved till G.P.U. goes bankrupt?

XE03  
5/10

Sincerely yours,  
Anthony Caquatto
