

### NOTICE OF VIOLATION

Dell Engineering, Inc.  
Holland, MI

License No. 21-25861-01  
Docket No. 030-30340

During an NRC inspection conducted on December 14, 1992, violations of NRC requirements were identified. In accordance with the "General Statement of Policy and Procedure for NRC Enforcement Actions," 10 CFR Part 2, Appendix C, the violations are listed below:

10 CFR 71.5(a) requires that licensees who transport licensed material outside the confines of their plants or deliver licensed material to a carrier for transport, comply with the applicable requirements of the regulations appropriate to the mode of transport of the Department of Transportation (DOT) in 49 CFR Part 170-189.

1. 49 CFR 172.600-604 requires, in part, that emergency response information accompany the shipment of a hazardous material.

Contrary to the above, since approximately December 14, 1988, emergency response information did not accompany the shipments of hazardous materials. Specifically, Troxler nuclear gauges were transported by the licensee to temporary job sites, and emergency response information did not accompany the shipments.

This is a Severity level IV violation (Supplement V).

2. 49 CFR 177.842(d) requires, in part, that packages of radioactive materials be so blocked and braced that they cannot change position during conditions normally incident to transportation.

Contrary to the above, since approximately December 14, 1988, the licensee transported packages containing radioactive materials which were not blocked and braced such that they could not change position during conditions normally incident to transportation.

This is a Severity Level IV violation (Supplement V).

Pursuant to the provisions of 10 CFR 2.201, Dell Engineering, Inc. is hereby required to submit a written statement or explanation to the U.S. Nuclear Regulatory Commission, Region III, 799 Roosevelt Road, Glen Ellyn, Illinois, 60137, within 30 days of the date of the letter transmitting this Notice of Violation (Notice). This reply should be clearly marked as a "Reply to a Notice of Violation" and should include for each violation: (1) the reason for the violation, or, if contested, the basis for disputing the violation, (2) the corrective steps that have been taken and the results achieved, (3)

the corrective steps that will be taken to avoid further violations, and (4) the date when full compliance will be achieved. If an adequate reply is not received within the time specified in this Notice, an order or a demand for information may be issued to show cause why the license should not be modified, suspended, or revoked, or why such other action as may be proper should not be taken. Where good cause is shown, consideration will be given to extending the response time.

Dated

12/24/92

  
Gary L. Shear, Chief  
Nuclear Materials Inspection  
Section 2
