Mr. A. E. Lundvall, Jr.
Vice President - Supply
Baltimore Gas & Electric Company
P. O. Box 1475
Baltimore, Maryland 21203

Dear Mr. Lundvall:

By letter dated November 21, 1984, the NRC staff issued its Safety Evaluation concerning masonry wall integrity at Calvert Cliffs Units 1 and 2 as related to our concerns as stated in IE Bulletin 80-11. At that time, we indicated that the evaluation of 22 masonry walls, utilizing the energy balance technique, was unacceptable without further justification. Subsequently, by letter dated June 12, 1985, BG&E presented additional information regarding the evaluation of these walls.

BG&E presented additional information regarding the evaluation of these walls.

The enclosed supplement to our November 21, 1984 Safety Evaluation concludes that BG&E's reevaluation of the subject masonry walls, utilizing methods other than the energy balance technique, is now acceptable. In addition, the NRC staff concludes that Items 2(b) and 3 of IE Bulletin 80-11 have been fully implemented at Calvert Cliffs and that there is a reasonable assurance that all safety-related masonry walls will withstand the specified design load conditions without impairment of (a) wall integrity or (b) the performance of the required safety function. Accordingly, your response to IE Bulletin 80-11 is acceptable and our review is complete.

Sincerely,

Edward J. Butcher, Acting Chief
Operating Reactors Branch No. 3
Division of Licensing
