CLINTON POWER STATION, P.O. BOX 678, CLINTON, ILLINOIS 61727

July 30, 1985

Docket No. 50-461

Director of Nuclear Reactor Regulation
Attn: Mr. W. R. Butler, Chief
Licensing Branch No. 2
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, DC 20555

Subject: Clinton Power Station Unit 1
Seismic and Dynamic Qualification of Equipment
SER Outstanding Issue #7

Dear Mr. Butler:

Please find attached for your Staff's review, the information necessary to prepare for your upcoming on-site audit of Seismic and Dynamic Qualification of Seismic Category I Mechanical and Electrical Equipment. A list of all safety-related equipment by system, component identification number, qualification status and installation status is being provided to you.

At the time of this letter, at least 85% of all equipment has been qualified with about 95% anticipated to be qualified by the end of August, 1985. Also, of the approximate 9100 items required to be qualified, about 6500 are installed (or about 71%). By the end of August at least 80% will be installed, such that a representative sample of each type of component will be available for audit.

It is our understanding that by August 2, 1985, your staff will select the items for the audit from the attached list so that additional information on these items can be provided to your audit team by August 13, 1985.

Please contact us if you have any questions regarding this matter.

Sincerely yours,

F. A. Spangenberg
Director - Nuclear Licensing
and Configuration
