Docket Nos. 50-317
and 50-318

Mr. Leon B. Russell
Plant Superintendent
Calvert Cliffs Nuclear Power Plant
Maryland Routes 2 and 4
Lusby, Maryland 20657

Dear Mr. Russell:

As previously discussed with your staff, two individuals, under contract to NRC, from the Los Alamos National Laboratory (LANL) will arrive at the Calvert Cliffs Nuclear Power Plant on June 22, 1981, to complete an engineering analysis for the purpose of identifying vital equipment at the site. This analysis will be accomplished during the period of June 22-24, and will require that the NRC contractors have access to both plant information and areas. Additionally, the assistance of one person highly knowledgeable of site layout and construction will be required for the entire period.

The names of the LANL personnel are Eddie Claiborn and Willard Thomas. Also, Bradley Jones, the NRC project leader for the vital area analysis program, will be on-site during the period to answer any questions that may arise.

This three day revisit is necessary because the LANL individual who performed the initial analysis was reassigned to a higher priority project shortly after returning to LANL. This action, which was outside of NRC control, prevented the translation of rough notes into a form that would have enabled another analyst to complete the effort.

Information you considered to be proprietary which will be required by these contractor personnel during the visit will be afforded protection from disclosure in accordance with standard NRC procedures.

We believe that this site visit can be handled under access requirements A ("Escorted Access to Controlled Area") of your November 1, 1970 letter. If this is not true, please notify me upon receipt of this letter.
