J. A. BERNARD, JR.
Director of Reactor Operations

December 30, 1992

U.S. Nuclear Regulatory Commission,
ATTN: Document Control Desk
Washington, D.C. 20555

Subject: Further Response to Request Dated 12/01/92 for Additional Information
(TAC No. M82958) Concerning Generation of Medical Therapy Facility
Beam for Human Therapy, License No. R-37, Docket No. 50-20

Gentlemen:

On 12/22/92, the Massachusetts Institute of Technology submitted, in their entirety, revised copies of proposed MITR Technical Specification No. 6.5, "Generation of Medical Therapy Facility Beam for Human Therapy" and "Quality Management Program for Generation of MITR-II Medical Therapy Facility Beam for Human Therapy." Also enclosed was the last page of existing Specification No. 7.13, "Plant Reporting Requirements." The revisions in those documents, which were denoted by italicized print, were made in response to the letter of 1 December 1992 from Mr. Alexander Adams, Jr. (Project Manager NRR/PDNP) to Dr. John A. Bernard (Director of Reactor Operations, MIT). All changes requested in that letter were made. However, three further changes, all minor, have subsequently been identified as being desirable. Accordingly, enclosed are revised copies of the above documents.

Sincerely,

John A. Bernard, Ph.D.
Director of Reactor Operations
MIT Research Reactor

JAB/gw

Enclosures: Revision to proposed MITR TS #6.5, section (i) of TS #7.13.5, and Quality Management Program
