(617) 735-2000

Date: Sept. 10, 1991

To : Steven R. Courtemanche
Health Physicist
Nuclear Regulatory Commission

From : John KurKornelis
Beth Israel Hospital, Boston
Assistant Radiation Safety Officer

Re: Dr. George Scheeles' Sink Disposal

This memo is in response to your audit findings of Dr. George Scheeles' sink disposal. Review of Donger-Er Zang protocol "Labeling with Fragments of 32P-dctp" and geneclean instructions from Bio 101, Inc., determined the combined total activity from the sample gels for sink disposal should of been 25.5 uCi., not the 250 uCi that was noted on the sink disposal log.

Corrective action was implemented for Dr. Sheele and his laboratory. All personnel were informed of the proper sink disposal procedure and limits. Sink disposal limits will be posted above the designated radioactive sink which also can be referenced in the hospitals Radiation Safety Manual.

The experimental protocol and geneclean instruction from Bio 101, Inc. are filed with Dr. Scheeles permit folder.

Please contact our office at 617-735-2510 if you require any additional information regarding this matter.
