Docket No. 40-8084

Source Material License No. SUA-1119

Re: License Condition No. 53

Dear Mr. Smith:

License Condition No. 53 requires Rio Algom Mining Corp. to submit a detailed reclamation plan to the USNRC, Uranium Recovery Field Office, within nine months of the issue date of its new license: July 1, 1985.

Additional work is needed to re-estimate the peak runoffs from the probable maximum precipitation event because the rainfall distribution used in calculations in our license renewal application in November, 1982 were unreasonably conservative. Since a revised rainfall distribution must be approved by the USNRC, before being used in reclamation flood protection plans, Rio Algom requests a three month extension of time to submit its detailed reclamation plan--September 30, 1985.

The foregoing was discussed in a telephone conversation with Dr. Harry Pettengill. If you have any questions, or require additional information, please call.
