Office of Fuel Cycle and Material Safety and Safeguards
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Gentlemen:

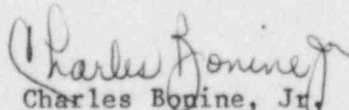

Recent changes in TVA's organizational structure along with personnel changes have necessitated revisions to certain parts of the NRC Materials License 41-06832-07 for Troxler moisture-density gages.

The principal changes are as follows:

1. Condition 10 of the license is expanded to include a storage facility for these gages at the Watts Bar Nuclear Plant near Spring City, Tennessee.
2. Condition 12 designates Kenneth A. Hasting as Division Radiation Safety Officer. Mr. Hasting has been reassigned and Mr. Stephen P. Stagnolia, formerly Assistant Division Radiation Safety Officer, will assume this duty.
3. There are several minor organizational changes indicated in the body of the attachments which are necessary to reflect our present organizational structure. They are underlined in the body of the attachments and are marked with a revision indicator.

We have also reorganized our license application into the new license format. We request your usual prompt approval of these changes. Should you need further information or clarification, please contact J. E. Rose, (615) 632-7840.

Yours truly,

Charles Bonine, Jr.
Manager of Construction
