

Appl. E-62
IMPLEMENTING PROCEDURES

TRANSPORTATION GROUP

I. PURPOSE

The purpose of these procedures is to support Montgomery County's response to an incident at the Limerick Generating Station, coordinating the provision of adequate transportation resources to Montgomery County residents located within the plume exposure pathway emergency planning zone.

II. SITUATION

- A. There are twenty-one (21) municipalities located within the Montgomery County section of the plume exposure pathway EPZ.
- B. Each risk municipality has identified residents who would be in need of transportation assistance in the event of an evacuation.
- C. The principal means of relocation of persons within the Montgomery County section of the EPZ in the event of an evacuation will be private automobiles.
- D. Special transportation provisions will be made for the following groups:
 - 1. Homebound invalids or handicapped persons requiring special transportation assistance (i.e., ambulance)
 - 2. School children (when school is in session)
 - 3. Persons without automobile transportation available to them
- E. Five (5) transportation staging areas have been designated for the purpose of positioning and assigning transportation resources not already assigned to a specific location. NOTE: Two (2) Transportation Staging Areas are located in Berks County.

III. ESSENTIAL DEFINITIONS

- A. Emergency Worker Decontamination Station - A facility located outside the EPZ where emergency workers are monitored for radioactive contamination and decontaminated if necessary (co-located with relocation points).
- B. Fixed Nuclear Facility Incident - An event or condition at a nuclear facility which could result in impact on public health and safety. Four incident classes have been developed to facilitate planning and responses:
 - 1. Unusual Event - An occurrence which indicates a potential degradation of the level of safety of the facility. No releases

of radioactive material requiring offsite response or monitoring are expected unless further degradation of safety systems occurs.

2. Alert - An occurrence which involves actual or potential substantial degradation of the level of safety of the facility. Any releases are expected to be limited to small fractions of the Environmental Protection Agency (EPA) protective action guideline exposure levels.
 3. Site Emergency - An occurrence which involves actual or likely major failures of facility functions needed for the protection of the public. Radioactive releases are not expected to exceed the EPA protective action guideline exposure levels except near the site boundary.
 4. General Emergency - An occurrence which involves actual or imminent substantial core degradation or melting with the potential for loss of containment integrity. Releases can reasonably be expected to exceed EPZ protective action guideline exposure levels offsite for more than the immediate site area.
- C. Protective Action - An action taken to avoid or reduce a projected dose of radiation. Some of the basic actions are:
1. Sheltering - Action taken by the public to take advantage of the protection against radiation exposure afforded by remaining indoors, away from doors and windows, and shutting off all sources of outside air during and following the passage of the radioactive plume. Motorists should close all windows and vents.
 2. General Evacuation - The relocation of the entire population from the plume exposure pathway EPZ.
 3. Selective Evacuation - The relocation of specific elements of the population, such as pregnant women, pre-school children or the infirm.
- D. State of Disaster Emergency - A state of disaster emergency exists whenever the Governor issues a declaration of disaster emergency. A disaster emergency shall be declared by executive order or proclamation of the Governor at any time upon finding that a disaster has occurred or that the occurrence or the threat of a disaster is imminent. The state of disaster emergency continues until the Governor finds that the threat or danger has passed and terminates it by executive order or proclamation, but no state of disaster emergency may continue for longer than 90 days unless renewed by the Governor. The term "state of disaster emergency" is not to be confused with the emergency classification terms called Site Emergency and General Emergency.
- E. Transportation Resource - Vehicle such as a bus, van or ambulance committed to support the evacuation of individuals without such transportation available to them.

- F. Transportation Staging Area - Location designated by the County or a municipality to which transportation resources respond for assignment.
- G. Transportation System - A transportation business or company located within and/or operating by license within the plume exposure pathway EPZ.

IV. RESPONSIBILITIES

- A. Each risk municipality is responsible for developing and maintaining a list of individuals requiring transportation assistance in an evacuation.
- B. The Montgomery County Transportation Group is responsible for identifying transportation needs and for coordinating resources necessary to meet those needs.
- C. Montgomery County will support the unmet transportation needs of municipality, special facilities and the homebound insofar as possible.

UNUSUAL EVENT

V. OPERATIONAL PROCEDURES

A. UNUSUAL EVENT

No action necessary.
