

DOCKET NO: 50-263

DATE: APR 2 1974

LICENSEE: Northern States Power Company

FACILITY: Monticello Nuclear Generating Station

MINUTES OF MEETING WITH NORTHERN STATES POWER COMPANY (NSP) REPRESENTATIVES  
IN BETHESDA, MARYLAND, ON MARCH 22, 1974 - MONTICELLO PROMPT RELIEF  
TRIP (PRT) ELECTRICAL CONNECTIONS AND CONTAINMENT PENETRATIONS

NSP and Directorate of Licensing representatives (see enclosed list for attendees) met to review the routing for all the PRT electrical cabling, including containment penetrations, the new connections at relief valves, connections to the reactor protection system, and cabinets. The purpose of the meeting was to expedite the Licensing evaluation so that installation can proceed as scheduled.

A suitable illustration of the two solenoid valve arrangement at the relief valves was not available during the meeting. NSP committed to provide a solenoid valve arrangement drawing and also, for similar reasons, to provide a list of electrical penetration categories with system identities and some representative electrical loads.
