RE: Mail Control No. 16604  
NRC License No. 42-01512-01  
Docket No. 030-06397

Dear Joy:

The renewal of Western License #42-01512 is not completed at this time by your office. Since the renewal process is not final, I would like to make one addition to that license at this time. I would like to add one extra facility location to Condition 10 of the license as follows:

The Western Company of North America  
79 Enterprise Place  
Evanston, WY 82930

Phone: (307) 789-0563

The Evanston facility will be possessing three 50 mCi CS 137 densimeters mounted on cement pump trucks. There is no plan at this time to use or store radioactive tracer material there. Mr. Robert L. Dillenbeck, District Engineer, will serve as the Radiation Supervisor at the location and report to the District Manager in Rock Springs, Wyoming. The Rock Springs District is responsible for the Evanston location's operations. Mr. Dillenbeck received his radiation training in September 1981 from Support Consultants Associates, Inc.

Thank you for your help in this matter.
