Mr. B. J. Youngblood, Chief  
Director of Nuclear Reactor Regulation  
Licensing Branch No. 1  
Division of Licensing  
U. S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Youngblood:

Reference: Fermi 2  
NRC Docket No. 50-341  
NRC License No. NPF-33

Subject: Schedule for Installation of  
Independent Alternate Shutdown System

Item Number 2.C.(9)(d) of the Fermi 2 Low Power Operating License requires, in effect, installation of the independent alternate shutdown system ("3L panel") prior to startup after the first known outage of three weeks or longer which occurs after September 30, 1985. This letter is to inform you that Detroit Edison will have a planned outage of at least this duration tentatively starting in the September/October time frame, and in no case starting later than October 30, 1985.

In accordance with the license condition, Detroit Edison will complete installation and testing of the 3L panel prior to startup from this outage. Included in this commitment are completion of any procedural modifications and operator training required to assure the alternate shutdown system is functional from both a personnel, software, and hardware standpoint. Proposed technical specifications for this 3L panel will be submitted prior to September 30, 1985.

We request you plan to allocate appropriate resources to review these proposed specifications consistent with our placing the panel into operation. We will inform you of a more definitive schedule for this when we submit the proposed technical specifications.

Any questions regarding this matter can be directed to Mr. O. K. Earle (313) 586-4211.

Sincerely,

A handwritten signature in cursive script, appearing to read "Wayne H. Jew".
