

Mr. John A. Koskinen
Deputy Director for Management
Executive Office of the President
Office of Management and Budget
Washington, D. C. 20503

May 24, 1996

Dear Mr. Koskinen:

I am responding to your memorandum dated April 11, 1996, regarding "Computer Difficulties at the Turn of the Century." The U. S. Nuclear Regulatory Commission has been actively involved in efforts to address this matter by the Chief Financial Officers Council and in the Office of Management and Budget monthly meetings with agency senior information resource management officials. The Commission is actively reviewing our systems and assessing the impact in the following areas: applications systems, vendor software, operating systems, and a voice mail system. Our preliminary review of computer systems indicates that some changes may be necessary on some of our smaller, more locally used applications, but our larger applications currently utilize the four-digit year. We believe that the survey strategy and schedule that we have developed for our applications, vendor software, operating systems, and voice mail will provide us with a sufficient period of time to correct any identified problems prior to the change of century.

Sincerely,

Original signed by
James M. Taylor

James M. Taylor
Executive Director for Operations

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D.C. 20555-0001

June 17, 1996

The Honorable Stephen Horn
Chairman, Subcommittee on Government
Management, Information and Technology
Committee on Government Reform and Oversight
United States House of Representatives
Washington, D. C. 20515-6143

Dear Mr. Chairman:

I am replying to your letter of April 29, 1996, and a supplemental request for information identified during a May 13 meeting between your staff, representatives of the Year 2000 Working Group, and the Office of Management and Budget. The Commission's response, which describes the NRC actions to prepare the agency's automated data processing systems for the Year 2000, is enclosed.

With respect to Year 2000 compliance, the NRC makes frequent use of interagency agreements to satisfy our data processing requirements. These agreements have permitted us to take advantage of the experience and resources of our larger Federal partners, which include the Departments of Energy, Health and Human Services, and Treasury. In addition, a number of our in-house systems have been scheduled for replacement with Year 2000 compliant software prior to the end of the century.

The Commission appreciates the guidance and coordination provided by the Subcommittee on Government Management, Information and Technology, and NRC will continue to work through the Office of Management and Budget in resolving this issue. Our agency point of contact for this activity is Gerald F. Cranford, Director, Office of Information Resources Management. Mr. Cranford can be reached by telephone (301-415-7585) or electronic mail (gfc@nrc.gov), should you have any questions regarding our submission.

Sincerely,

Shirley Ann Jackson

Enclosure:
Response to Committee Questions

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON D C 20555-0001

June 17, 1996

The Honorable Carolyn Maloney
Ranking Member, Subcommittee on Government
Management, Information and Technology
Committee on Government Reform and Oversight
United States House of Representatives
Washington, D. C. 20515-6143

Dear Congresswoman Maloney:

I am replying to your letter of April 29, 1996, and a supplemental request for information identified during a May 13 meeting between your staff, representatives of the Year 2000 Working Group, and the Office of Management and Budget. The Commission's response, which describes the NRC actions to prepare the agency's automated data processing systems for the Year 2000, is enclosed.

With respect to Year 2000 compliance, the NRC makes frequent use of interagency agreements to satisfy our data processing requirements. These agreements have permitted us to take advantage of the experience and resources of our larger Federal partners, which include the Departments of Energy, Health and Human Services, and Treasury. In addition, a number of our in-house systems have been scheduled for replacement with Year 2000 compliant software prior to the end of the century.

The Commission appreciates the guidance and coordination provided by the Subcommittee on Government Management, Information and Technology, and NRC will continue to work through the Office of Management and Budget in resolving this issue. Our agency point of contact for this activity is Gerald F. Cranford, Director, Office of Information Resources Management. Mr. Cranford can be reached by telephone (301-415-7585) or electronic mail (gfc@nrc.gov), should you have any questions regarding our submission.

Sincerely,

Shirley Ann Jackson

Enclosure:
Response to Committee Questions

U. S. Nuclear Regulatory Commission Response to
Committee on Government Reform and Oversight Questions
Regarding Preparing Automated Systems for Year 2000

QUESTION 1. Has your agency begun an effort to ensure that your information systems are year 2000 compliant? If so, when did the effort begin? What steps are they taking to ensure compliance?

ANSWER.

The NRC staff began inquiries into Year 2000 compliance of specific software applications more than a year ago. However, a systematic and comprehensive review of its inventory of automated systems did not begin until early in the current fiscal year. The initial step will be to identify all systems which are not expected to be in use in the Year 2000. Systems scheduled for replacement or retirement prior to this date will not be considered. Systems scheduled for replacement at NRC prior to the end of the century include payroll, personnel, and document management systems.

QUESTION 2.

Has your agency been represented on the Interagency Working Group on the Year 2000?

ANSWER.

NRC is not a member of the Interagency Working Group. However, the staff continues to keep abreast of the Working Group's progress through the Office of Management and Budget and other agency contacts.

QUESTION 3.

Have you performed an appraisal or assessment of the vulnerability of your programs and applications to the year 2000 problem? If one is planned, but has not been completed, indicate when it is expected to be completed and how it is being performed. If it has been completed, please furnish a copy.

ANSWER.

The NRC has not yet completed a comprehensive assessment of all programs and applications with regard to their vulnerability to the Year 2000 change. An informal review of some of the agency's major in-house systems indicates that these systems are either Year 2000 compliant or will be replaced by compliant systems before that date. Our initial results will be confirmed as part of our more comprehensive assessment. In addition to examining the ability of applications to properly store a four-digit year, NRC will perform limited risk assessment activities and apply external influences on the systems, such as aging the operating system dates and regression testing. Our current schedule calls for this level of testing during the next fiscal year.

QUESTION 4.

Have you evaluated the vulnerability of your agency's systems and applications to external organizations, such as states or other entities, that fail to modify their own systems for the year 2000 problem? If one is planned, but has not been completed, indicate when it is expected to be completed and how it is being performed. If such an analysis has been completed, please furnish a copy.

ANSWER.

The NRC has a limited number of systems that accept data from external sources. Examples include the Nuclear Materials Management and Safeguards System (NMMSS), which is the official U.S. materials control and accountability system. NMMSS data are transmitted in electronic form by materials licensees. The Year 2000 compliance issue was raised by the NRC staff prior to product baseline tests more than one year ago. Compliance is being confirmed by the NRC and its co-sponsor, the U.S. Department of Energy. Other systems are now being identified and assessment of their vulnerabilities to external organizations will begin during the next fiscal year.

QUESTION 5.

Have you developed a plan for the year 2000 problem? If one is planned, but has not been completed, indicate when it is expected to be completed and how it is being developed. If it has been completed, please furnish a copy.

ANSWER.

The NRC has developed an Action List to: 1) address the review of application systems that are centrally maintained by the agency, 2) raise awareness of those individuals who have developed applications locally, 3) evaluate operating system software and vendor software, and 4) evaluate the agency's voice mail system. As NRC pursues these items and continues to follow the experience in other Federal agencies, it is anticipated that our Action List will be expanded. A copy of this Action List is provided as Exhibit 1.

QUESTION 6.

Does your year 2000 plan, if completed, contain specific timetables and milestones? What performance indicators are you using for determining whether your computer programs and applications are year 2000 compliant?

ANSWER.

In Exhibit 1, timetables for these activities within the agency have been established. For shared systems, NRC will be working with our co-sponsor or host agencies to establish specific timetables and milestones. In most cases, decisions will be made by the prime sponsoring agency after consultation with the NRC. For local systems, our performance indicators will be based on appropriate date manipulation with predictable date outcomes, initialization of fields, and system date impacts when applying regression and aging.

QUESTION 7.

Do you have contingency plans for your year 2000 project if your agency is unable to complete your year 2000 plan as scheduled? When would you make a decision to implement the plans? If available, provide a copy of the plan.

ANSWER.

NRC does not have a contingency plan developed specifically for the Year 2000 issue. However, the agency does have contingency plans for our major data processing systems and will confirm applicability of those plans for the Year 2000 transition. The NRC recognizes the value of having a contingency plan and anticipates that one will be incorporated into our overall strategy for corrective actions by Fiscal Year 1998.

QUESTION 8.

Do you have an estimate of the lines of code (inventory) of the major computer programs, platforms and languages for your agency? If so, please provide it (the inventory) to the subcommittee.

ANSWER.

We have developed such an inventory against our major business areas (Exhibit 2). The inventory does not contain an estimate of the lines of code for each computer program.

QUESTION 8.b.

Do you have an estimate of the total number of lines of programming code at your agency and the number of lines required to be changed? If so, provide it.

ANSWER.

No, our current inventory does not contain this type of information. We use other parameters (e.g., disk storage requirements or run time) to estimate our resource needs. A typical agency system at NRC consists of the operating system on a time-shared computer, a commercially-available data base management system, and auxiliary coding and data files. Because some of the application components may consist of commercial off-the-shelf software, NRC may not have access to the source code and would be unable to estimate the number of lines of code involved. We do, however, intend to confirm Year 2000 compliance of all components.

(Note: Questions 8.a. and 8.c. have been deleted according to the May 29, 1996 E-Mail message revising the original request.)

QUESTION 9.

If you currently do not intend to have all your systems Year 2000 compliant, have you developed a prioritization of which systems need to be fixed in order to avoid an adverse impact on the public? Have you prioritized your applications and determined which ones can be set aside if all cannot be modified by 2000? Please provide a list of those major applications that have been designated secondary and the activity with which they are used.

ANSWER.

Our initial prioritization has focused on agency-wide applications, which have a broad impact on agency operations. NRC has not determined which applications can be set aside if all cannot be modified by the Year 2000. NRC anticipates that such a prioritization will be included in our inventory assessment. It is anticipated that there will be few, if any, applications that are both non-compliant and cannot be corrected by the Year 2000.

QUESTION 10. Who at your agency is your project manager?

ANSWER.

The project manager is Gerald F. Cranford, Director, IRM.

a. Who has overall responsibility for the year 2000 issue?

Gerald F. Cranford, Director, IRM.

b. Who has day-to-day responsibility?

John C. Voglewede, Assistant to the Director, IRM.

c. What other responsibilities does the day-to-day manager perform?

Mr. Voglewede is responsible for coordinating office-level activities within NRC's Office of Information Resources Management.

QUESTION 11.

Describe how your year 2000 project is being staffed.

(Provide, if appropriate, an organization chart for your year 2000 project, indicating the reporting arrangements for personnel, including names, titles, and grade levels.

Include the activities of constituent components of your agency, if they are involved.)

ANSWER.

Exhibit 3 is an organizational chart depicting the senior management structure of the NRC. The reporting arrangements for the Year 2000 compliance program are also shown. With the exception of the Commissioners, who receive presidential appointments, all individuals identified in this reporting structure of this exhibit are career members of the Senior Executive Service. It should be noted that the NRC is considering organizational changes as a result of the Information Technology Management Reform Act of 1996 that could affect the depicted organizational structure.

QUESTION 12.

Has top agency management received a briefing on the year 2000 project? Please provide a copy of the most recent report, if it was in writing.

ANSWER.

Top level career Senior Executive Service managers, whose responsibilities are directly affected, have been briefed. The Commissioners and other SES staff have not yet been briefed. We have not yet issued a status report on the Year 2000 compliance project.

QUESTION 13.

What resources are being devoted or do you project will be devoted [to] the year 2000 issue?

- a. What are your cost estimates? What are the components of these cost estimates by fiscal year?

ANSWER.

NRC has not developed cost estimates for the Year 2000 compliance program. NRC will be unable to do so until completing our inventory assessment of agency systems described previously. If Year 2000 compliance can be established during the previously-scheduled replacement of existing systems, NRC anticipates only modest additional costs for our remaining in-house systems. For applications shared with other agencies, NRC expects costs to be borne by the prime sponsoring agency.

QUESTION:

- b. How are you going to pay for it (i.e., reprogramming of existing resources, new needs, incorporation into existing projects)?

ANSWER.

NRC anticipates that its needs will be met by reprogramming existing resources or incorporation of Year 2000 requirements into existing projects. No new funding requirements are anticipated.

QUESTION. c. Are there special cost considerations at your agency
 (such as archaic languages)?

ANSWER.

The Nuclear Regulatory Commission has no special cost considerations other than a dependence on systems developed and operated by other agencies. The shared use of common systems is most frequently accomplished by interagency funding transfer.

There are some instances of applications software or operating system versions that are no longer supported by the original vendor. These systems are candidates for replacement or retirement prior to the end of the century.

NRC has identified some cases of Year 2000 compliance that may involve more than direct software modification costs. As an example, the agency expects to replace the agency's document management system before the turn of the century. However, the existing system is based on a bibliographic index of an extensive microfiche collection. The microfiche use a two-digit year code as part of the accession number. Conversion of these records to a more modern system will be made only after establishing the backfit requirements for the replacement system.

QUESTION.

- d. What is your estimate of your cost per line of code for your year 2000 project?

ANSWER.

Virtually all of the Nuclear Regulatory Commission's more recent systems development efforts have relied upon (a) integrated or direct use of commercial off-the-shelf software, (b) shared use of software developed and operated by other Federal agencies, or (c) modular software development methods utilizing commercial software tools. None of these are amenable to cost estimates per line of code. Within the agency's legacy systems, where the question is more relevant, the greatest opportunity has been found for replacement or retirement of entire systems rather than simply correcting individual lines of code.

(Note: Questions 13.e-g. have been deleted according to the May 20, 1996 E-Mail message revising the original request)

EXHIBIT 1

ACTION LIST FOR YEAR 2000

ACTION STEPS	DATES	STATUS
1) Spot check of several critical systems to ascertain possible impact and scope.	MAR1996	Closed
2) Issue instructions to all SDIB staff to initiate a review of dates (fields, screens, edits, initialization routines, etc.) as part of TACs for modification or enhancement of systems.	APR1996 -APR1998	

Identify whether changes are needed (extent of change).

If quick and easy - fix.

If not, record actions necessary.

Documentation

Report in weekly highlights

Quarterly review of outstanding
systems and correction actions

Report Progress in Director's
(IRM) Monthly Report

3) Evaluate various COTS packages and
versions of these packages to ascertain
how they record and process dates. Document
the findings and determine stable versions
to deploy. Begin with standard packages
(i.e., DOS, dBase, Lotus, etc.) but address
even one-of-a-kinds.

APR1996

-JAN1998

Documentation

Report Progress in Director's
(IRM) Monthly Report

Develop information from findings
to be used in Bulletins and other
guidance documents

ACTION STEPS	DATES	STATUS
<p>4) Issue Network Bulletin with Interim Guidance regarding what to look for in reviewing National Lab, private contractor, locally-developed products for the potential impact of the century change and what IRM is doing for other applications and systems.</p>	JUN1996	
<p>5) Issue Memorandum to all Office Directors and Regional Administrations along with copy of the Bulletin (4 above) to raise awareness in offices other than IRM. Solicit identification of system/programs and feedback to IRM on progress of evaluation (software base of system, where running, host machine, point of contact, and status of review).</p>	JUN1996	
<p>6) Evaluate Operating Systems and utility software on NRC-owned minicomputers to insure that internal calendars can appropriately handle the century change.</p>	MAY1996	-SEP1996

Develop guidance to make this type of evaluation a check point in applying software upgrades.

Documentation

Report findings and progress in Director's (IRM) Monthly Report

7) Evaluate Unix-based Operating Systems to insure that internal calendars can appropriately handle the century change. Develop Guidance to make this a check point in applying software upgrades.

MAY1996

-SEP1996

Documentation

Report findings and progress in Director's (IRM) Monthly Report

ACTION STEPS	DATES	STATUS
<p>8) Compile information from Directors and Regional Administrators with that of IRM. Evaluate progress and perform analysis of next steps.</p> <p>Documentation</p> <p>Every six months issue additional guidance on techniques for identification</p> <p>Report to EDO on progress of effort and outstanding items</p>		
<p>9) Assist other offices by writing letters to leased data centers or development centers (Parklawn, NIH, DOE National Labs, CNWRA, etc.) providing guidance on Operating System and internal calendar checks to be performed and requesting assurance that they are ready to handle the year 2000.</p>	SEP1996	

10) Check with telecommunication service vendors SEP1996
regarding their ability to properly address
year 2000. Make this a recheck point in
any new orders or upgrades of service.
