Subject: WCAP-13610, "Safety Evaluation Supporting the Conditional Exemption of the Most Negative EOL Moderator Temperature Coefficient Measurement," January 1993 [Proprietary]

Dear Mr. Jones:

Enclosed are:

1. Fifteen (15) copies of WCAP-13610, "Safety Evaluation Supporting the Conditional Exemption of the Most Negative EOL Moderator Temperature Coefficient Measurement," January 1993 [Proprietary]

The enclosed information is being submitted for your review and approval. This report proposes modifying the EOL Moderator Temperature Coefficient (MTC) surveillance by placing a set of conditions on core operation which, if met, would allow for the exemption of a Surveillance Requirement (SR) measurement. Plant safety criteria will not be compromised by conditional exemption of this one measurement. As discussed in our October 27, 1992 presentation to the Staff on this subject, it is expected to reference this report on a plant docket due second quarter of 1993. Therefore, a timely review is requested.

This submittal contains Westinghouse proprietary information of trade secrets, commercial or financial information which we consider privileged or confidential pursuant to 10CFR9.5(4). Therefore, it is requested that the Westinghouse proprietary information attached hereto be handled on a confidential basis and be withheld from public disclosure.

This material is for your internal use only and may be used solely for the purpose for which it is submitted. It should not be otherwise used, disclosed, duplicated, or disseminated, in whole or in part, to any other person or organization outside the Office of Nuclear Reactor Regulation without the express prior written approval of Westinghouse.
