E. J. Moretti
Radiation Specialist (Review)

PHONE CALL - AMERICAN POTASH AND CHEMICAL INSPECTION - DELETION OF CITATION
BUTLER UNIVERSITY, REQUEST FOR AEC-591 NOTES FOR DML

1. Brockett called advising that Page has not included citation against 10 CFR 20.201(b) - failure to survey contaminated equipment to scrap. Page has, however, included a paragraph to this practice in the Part 2 letter to the licensee and a copy of the "di minimus" letter set forth by DML for release of equipment or facilities to public use. This letter outlines certain contamination limits which DML feels present no hazard to the general public. Brockett was advised Region III found no problem with this deletion.
2. Brockett advised that Dan Howell, DML, requested a copy of Schultz's AEC-591 expanded notes of the inspection conducted of Butler University License No. 13-1865-2 program. It appears the university has applied for a license for a teletherapy (or irradiation device) device and Howell would like to have some inspection background information of the licensee to permit him to evaluate the pending application.
