The scope of the reactor pressure vessel internals examination is based on that identified in the Monticello program and in Section 5.2.3.2.1.3 of the Preliminary Safety Analysis Report (PSAR) for the Perry plant. The procedures used to do the examinations will incorporate the Monticello-type techniques for detection of InterGranular Stress Corrosion Cracking (I.G.S.C.C.).

We trust this will satisfy the referenced license condition. If you require additional information, please contact this office.

Very truly yours,

John D. Leonard, Jr.  
Vice President - Nuclear Operations
