U.S. Nuclear Regulatory Commission  
Attention: Document Control Desk  
Washington, D.C. 20555

Gentlemen:

Subject: Submittal of Pages Inadvertently Omitted from Proposed Change  
No. 100 to Technical Specifications, "Elimination of Main Steam  
Line Radiation Monitor Scram and Isolation Functions"  
Cooper Nuclear Station, NRC Docket No. 50-298, DPR-46

Reference: Letter from G. R. Horn (NPPD) to NRC dated May 4, 1992, "Elimination  
of Main Steam Line Radiation Monitor Scram and Isolation Functions,  
Cooper Nuclear Station, NRC Docket No. 50-298, DPR-46"

The Nebraska Public Power District (District) herewith submits revised Cooper  
Nuclear Station (CNS) Technical Specification pages 78, 81, and 84 which were  
inadvertently omitted from Proposed Change No. 100, submitted to the NRC by  
letter dated May 4, 1992 (Reference). These pages were apparently truncated from  
the submittal during reproduction of the package for distribution. The changes  
included in these pages have been reviewed and evaluated by the District's safety  
review committees, and are discussed in the Proposed Change No. 100 description  
and safety evaluation. Therefore, this submittal does not impact the Significant  
Hazards evaluation provided in the Reference.

Please contact me if you have any questions or require any additional  
information.

Sincerely,

G. R. Horn  
Nuclear Power Group Manager
