SUPPORTING STATEMENT
FOR
10 CFR PART 40, DOMESTIC LICENSING OF SOURCE MATERIAL
10 CFR PART 70, DOMESTIC LICENSING OF SPECIAL NUCLEAR MATERIAL
AND
10 CFR PART 150, EXEMPTION AND CONTINUED REGULATORY AUTHORITY
IN AGREEMENT STATES AND IN OFFSHORE WATERS

AMENDMENT TO REPORTING REQUIREMENTS FOR SOURCE MATERIAL
10 CFR Section 40.64(b)
10 CFR Section 150.17(b)

AMENDMENT TO REPORT REQUIREMENTS FOR SPECIAL NUCLEAR MATERIAL
10 CFR Section 70.53(a)(1)

1. Justification

Sections 40.64(b), 70.53(a)(1) and 150.17(b)

10 CFR Section 40.64(b) currently requires each NRC licensee who is authorized to possess at any one time and location more than 1,000 kilograms of uranium or thorium, or any combination thereof, to complete and submit to the NRC within thirty days after September 30 of each year a statement of his source material inventory. 10 CFR Section 150.17(b) imposes the same requirement on Agreement State licensees.

10 CFR Section 70.53(a)(1) currently requires each licensee who is authorized to possess at any one time and location special nuclear material in a quantity totaling more than 350 grams of contained uranium-235, uranium-233, or plutonium, or any combination thereof, to complete and submit to the NRC Material Balance Reports (742) and a statement of the composition of the ending inventory (742C) within thirty days of March 31 and September 30 of each year.

The collection and recording of data for inventory purposes is a continuing process that the licensee carries out throughout the year for the licensee's internal records. At the specified times for inventory reports, the licensee

simply submits the accumulated data from the licensee's records, based either on book inventory or on data from a physical inventory taking, to NRC in the report. The requirement to report within thirty days of the ending data is a reasonable measure to ensure timeliness in receipt of inventory data by NRC in order to maintain material accountability under its statutory responsibility under the Atomic Energy Act to ensure protection of the common defense and security. Moreover, the US/IAEA Safeguards Agreement specifies that reports are to be submitted within 30 days following a physical inventory taking.

a. & b. Need for and Practical Utility of the Information Collection

As the result of a reevaluation of the safeguards data collection and processing requirements, NRC has determined that with the exception of licensees reporting under the US/IAEA Safeguards Agreement and reporting composition of ending inventory by persons licensed to operate nuclear reactors, the requirements to report inventories on Material Balance Reports can be deleted. Instead, the NRC would computer generate, for each licensee, an inventory report based on material transaction reports submitted to the NRC on Form 741 for special nuclear material and foreign origin source material. Attached are a DOE/NRC Form 742 to be completed by licensees who report under the US/IAEA Safeguards Agreement (10 CFR Part 75), a copy of a sample generated 742 report, and a DOE/NRC Form 742C to be completed by licensees who report composition of ending inventory under Part 75 and those licensed to operate nuclear reactors. (In a separate rule-making action effective July 15, 1984, the requirement to report domestic transfers of U.S. origin source material was deleted. Only imports, exports, and domestic transfers of foreign origin source material are currently reported to the transaction data base.)

Revised Section 40.64(b) would require each licensee who is authorized to possess more than 1,000 kilograms of uranium or thorium or any combination of uranium or thorium to verify and update a statement of material balance generated by the Commission provided the database indicates that the licensee has had foreign origin source material during the period of the report. The statement will contain data concerning source material of foreign origin received, possessed, transferred, consumed, disposed of, or lost by the licensee. This information is needed to provide to the Australian and Canadian Governments a periodic report showing the inventory of all materials in each U.S. facility that is subject to their respective Bilateral Agreements.

The statement will be generated by the Commission as of September 30 of each year and mailed to the licensee by October 15 of each year. The licensee will verify and update the statement and, if any change is necessary, submit a statement indicating the updating changes to the Commission by October 31.

Revised Section 150.17(b) imposes the same requirement on Agreement State licensees as revised Section 40.64(b) above.

Revised Section 70.53(a)(1) would require each licensee who is authorized to possess more than 350 grams of special nuclear material (uranium-235, uranium-233, or plutonium) in any combination to verify and update a statement of material balance generated by the Commission concerning special nuclear

material received, produced, possessed, transferred, consumed, disposed of or lost by the licensee. This information is necessary to the domestic inspection program and is needed to provide to the Australian and Canadian Governments a periodic report showing the inventory of all materials in each U.S. facility that is subject to their respective Bilateral Agreements.

The Statement will be generated by the Commission as of March 31 and September 30 of each year and mailed to the licensee by April 15 and October 15. The licensee will verify and update, and if any change is necessary, submit a statement indicating the updating changes to the Commission by April 30 and October 31.

In addition, persons licensed to operate nuclear reactors are required to prepare and submit a statement of composition of ending inventory (Form 742C) as of March 31 and September 30 of each year and file within thirty (30) days after the end of the period covered by the report.

This information is necessary to the domestic inspection program and cannot be generated by the Commission from other data sources.

c. Duplication of Other Collections of Information

In general, information required by the NRC in reports concerning inventory of nuclear materials does not duplicate other Federal information collection requirements and is not available from any source other than licensees. Portions of the needed information might also be contained in other information submittals to the NRC or other Federal agencies. However, duplication, if any, is slight, and the collection of this information by use of specified forms and other required reports is the most effective and least burdensome means of obtaining the information.

d. Consultations Outside the NRC

Consultations during development were made with Safeguards and Security, Department of Energy.

2. Description of the Information Collection

a. Number and Type of Respondents

The amendment affects approximately 350 NRC and Agreement State licensees of which approximately 150 are small independent industrial manufacturers, each with an estimated annual gross income of less than \$1 million and a staff of fewer than 500 people.

b. Reasonableness of the Schedule for Collecting Information

Affected SNM licensees will be required to review and verify a computer generated statement twice yearly. This schedule is reasonable because the review and verification will coincide with a physical inventory taking, if applicable. Affected source material licensees will review and verify the statement once per year based on book inventory.

c. Method of Collecting the Information

The review and verification of the Commission generated report is the least burdensome method of obtaining the objective because the review and verification at the licensee site will in most cases eliminate the need for submission of a report to the Commission except when adjustments are necessary.

d. Adequacy of the Description of the Information

Licensees presently submit a report to the Commission with the required information. The computer generated report that the licensees will be required to review and verify will be a facsimile of the report currently submitted. The schedule for submission to the licensee is stated in the regulation as is the schedule for the licensee to submit any changes, if necessary.

e. Record Retention Period

None. Any material balance reports, inventories, forms, and transaction reports are retained, if at all, pursuant to 10 CFR Sections 40.61(a), 70.51(b), and 75.21 through 75.24, all of which have been previously approved by OMB.

f. Reporting Period

Persons licensed under Parts 40 and 150 are required to review and verify a Commission generated statement of inventory once a year. Part 70 licensees are required to review and verify a statement of inventory twice yearly. If changes are necessary, the licensee will submit a statement indicating the updating changes to the Commission. Otherwise, no submission to the Commission is necessary.

g. Copies Required to be Submitted

If changes are to be made to the Commission generated statement, one copy with updating changes will be submitted to the Commission. Otherwise, no response is necessary.

3. Estimate of Burden

a. Estimated Hours Required to Respond to the Collection

The burden for review and verification of each statement is estimated to be one hour. A total of approximately 450 statements are expected to be reviewed and verified annually. Approximately 40 Part 40 licensees will review and verify one statement each year; approximately 200 Part 70 licensees will review and verify 2 statements each year; and approximately 10 Part 150 licensees will review and verify one statement each year. Thus the total resulting burden for all licensees will be 450 hours. The decrease since the last clearance is a result of the reduced number of licensees required to submit inventory data and the reduction in time resulting from the change in the method of collection. The reduction in the use of NRC Forms 742 and 742C resulting from these revisions will be reflected in OMB clearance numbers 3150-0004 and 3150-0058.

b. Estimated Cost Required to Respond to the Collection

The annual cost to each Part 40 and 150 respondent to comply with the requirement is estimated to be \$60. The annual cost to each Part 70 respondent is estimated to be \$120. The total annual cost to all affected licensees is estimated to be \$27,000. This represents a reduction of 750 hours or \$45,000 annually.

c. Source of Burden Data

This data is based on informal consultations by the staff with a small number of typical licensees and analysis of actual submissions of inventory reports during CY 1983. Cost data is based on \$60 per hour.

4. Estimate of Cost to the Federal Government

<u>Section</u>	<u>Cost to Government</u>
40.64(b)	
150.17(b)	
70.53(a)(1)	
DOE/NRC Forms 742, 742C	
Annual Cost - NRC Staff Review (Professional effort - 5 min/report @ \$60/hr.)	= \$ 50.00
Annual Cost - Clerical Processing (Clerical effort - 60 min/form @ \$60/hr.)	= *
Annual Administrative Costs (Postage, handling, envelopes, etc.)	= 20.00
Annual Cost for Record Holdings (65 cu.ft. x \$209/cu.ft.)	= *
Annual Printing Costs	= 500.00
Annual Cost for Storage of Forms in NRC Supply (\$2.10 per 1,000)	= negligible
Annual ADP Cost	= <u>*</u>
TOTAL ANNUAL COST	\$570.00

* NRC and DOE share the cost of operating the Nuclear Material Management and Safeguards System (NMMSS). Current and projected cost of the system is: FY85, \$1.4 million; FY86, \$1.6 million. 25% of these costs are attributable to report forms. This includes cost of ADP, recordholding, and clerical processing of all forms (DOE/NRC Forms 741, 741A, 740M, 742, 742C, and IAEA Form N-71). It is not possible to suballocate this cost to individual forms. For simplicity, this entire cost is allocated to Form 741 (OMB No. 3150-0003) and is omitted from the cost data for the remaining forms.

5. Impact on NRC's Information Collection Budget

Currently, all licensees authorized to possess 1,000 kilograms or more of source material or 350 grams or more of special nuclear material are required to submit a statement of inventory.

The number of the affected licensees is reduced from 350 to 250. The amount of time required to comply with the requirement is reduced by the change in method of collection from 2 hours per report to 1 hour.
