Docket 50-293

Technical Specification "Bases" Change to
3.5.A, "Core Spray and LPCI System"

The attached change updates Pilgrim Nuclear Power Station Technical Specification Section 3.5.A, "Core Spray and Low Pressure Coolant Injection" "Bases", to reflect the latest Loss-of-Coolant-Accident (LOCA) analysis for Pilgrim station. The new analysis was performed using General Electric's SAFER/GESTR-LOCA methodology. The results of the analysis have been incorporated into Pilgrim's Final Safety Analysis Report (FSAR) Section 6.5.

In accordance with 10CFR50.36(a), the "Bases" are not part of the Technical Specifications. Therefore, "Bases" changes do not constitute an amendment to the operating license and prior NRC approval is not required. Please incorporate this change into your copy of the Pilgrim Nuclear Power Station Technical Specifications.
