SUBJECT: NRC INSPECTION REPORT 030-32190/93-01

This refers to the routine, unannounced inspection conducted by Mr. Robert A. Brown of this office on February 4, 1993. The inspection included a review of activities authorized by Byproduct Material License No. 49-27356-01. At the conclusion of the inspection, the findings were discussed with members of your staff.

The inspection was an examination of activities conducted under the license as they relate to radiation safety and to compliance with the Commission's rules and regulations and the conditions of the license. The inspection consisted of selective examinations of procedures and representative records, interviews of personnel, independent measurements, and observation of activities in progress.

No violations or deviations were identified; therefore, no response to this letter is required.

For the size and scope of your licensed program it appears adequate attention and resources are being devoted to your radiation safety program.

Also reviewed were the actions you had taken with respect to the violations observed during our previous inspection conducted on February 28, 1992. The inspection verified that the corrective actions for these violations had been implemented as stated in your reply dated March 23, 1992, and that these actions were effective.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter will be placed in the NRC Public Document Room.
