SUBJECT: Amendment of License # 24-16281-01 to permit isotope sharing.

Dear Mr. Mallett:

I do endorse the concept of isotope sharing between the Nuclear Medicine facility of Columbia Regional Hospital and Boone Hospital Center here in Columbia, Missouri. I request that our license be amended to permit us to either borrow or loan unit dose amounts of radioisotopes from or to Boone Hospital Center here in Columbia, Missouri.

I understand that in the instance of Boone Hospital Center and Columbia Regional Hospital there would be a "sharing" of resources and that radioactive materials could move in both directions, that is from Boone Hospital Center to Columbia Regional Hospital or from Columbia Regional Hospital to Boone Hospital Center. In each center however, the transport of these unit doses would be the responsibility of the Boone Hospital Center and would be performed in accordance with the specifications defined in their request for license amendment.

I do not visualize a weekly transaction of this sort. However, it would certainly be helpful to both parties in an "emergency" situation. Also, there is the potential for some significant cost savings.

Sincerely,

Howard D. Le Vant  
Administrator
