NOTICE OF VIOLATION

Professional Service Industries, Inc.

License No. 12-21501-01

As a result of the inspection conducted on May 15-16, 1985, and in accordance with the General Policy and Procedures for NRC Enforcement Actions, (10 CFR Part 2, Appendix C), the following violations were identified:

1. License Condition No. 16 requires that licensed material be possessed and used in accordance with the statements, representations, and procedures contained in certain referenced applications and letters.

The referenced application dated February 25, 1982 as amended July 19, 1982 states in paragraph 3.0 that each radiographer and each radiographer's assistant will be inspected by the radiation safety officer at intervals not to exceed 3 months.

Contrary to this requirement, the radiation safety officer failed to inspect radiographers and radiographer's assistants at the proper intervals. Specifically, the radiation safety officer failed to inspect a radiographer who performed radiography during the period from September 30, 1984 to the day of the inspection, May 16, 1985, failed to inspect a radiographer who performed radiography from June 27, 1984 to January 25, 1985, and failed to inspect a radiographer's assistant who worked with radiographers on numerous occasions in 1984.

This is a Severity Level IV violation (Supplement VI).

2. 10 CFR 34.31(a)(4) requires that the licensee not permit an individual to act as a radiographer until such individual has demonstrated an understanding of the instructions in paragraph (a) by successful completion of a written test and a field examination on the subjects covered. 10 CFR 34.31(c) requires that training records be maintained for three years, and should include copies of the written tests and dates of oral tests and field examinations.

Contrary to this requirement, the licensee failed to maintain copies of the written test or the dates of oral tests and field examination completed by an individual who acted as a radiographer at one of the licensee's field sites during the period from February 18, 1985 to February 21, 1985, although the licensee did maintain a copy of the radiographer's recertification examination completed on January 25, 1985.

This is a Severity Level V violation (Supplement VI).

3. 10 CFR 34.28(b) requires each licensee to conduct a program for inspection and maintenance of radiographic exposure devices, storage containers and source changers at intervals not to exceed three months.

Contrary to this requirement, the licensee failed to inspect exposure devices, storage containers and source changers used since December 7, 1984 to the day of the inspection, May 16, 1985, a period exceeding three months.

This is a Severity Level IV violation (Supplement VI).

4. 34.33(a) requires that each film badge or TLD be worn by only one individual.

Contrary to this requirement, the licensee permitted an individual to wear a film badge during the period from February 18, 1985 to February 21, 1985, and that film badge was originally assigned to an employee who had terminated prior to February 18, 1985.

This is a Severity Level IV violation (Supplement VI).

5. 10 CFR 71.12(a)(b)(c)(3) requires that each licensee who transports licensed material in a package for which a license, Certificate of Compliance, or other approval has been issued by the NRC, shall have a quality assurance program approved by the Commission as satisfying the provisions of Subpart H of this part, and that the licensee submits in writing to the Director, Office of Nuclear Material Safety and Safeguards, U. S. Nuclear Regulatory Commission, Washington, D.C. 20555 prior to the licensee's first use of the package, this submittal must include the licensee's name and license number and the package identification number specified in the package approval.

Contrary to this requirement, the licensee has routinely transported licensed material since December 12, 1983 in packages for which a license, Certificate of Compliance, or other approval has been issued by the NRC, and the licensee failed to submit a quality assurance program to the NRC for approval, and failed to submit in writing to the Commission prior to first use of the packages, the licensee's name and license number and the package identification number specified in the package approval.

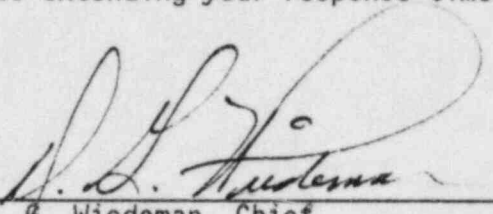

This is a Severity Level IV violation (Supplement V).

Pursuant to the provisions of 10 CFR 2.201, you are required to submit to this office within thirty days of the date of this Notice a written statement or explanation in reply, including for each item of noncompliance: (1) corrective action taken and the results achieved; (2) corrective action to be

taken to avoid further noncompliance; and (3) the date when full compliance will be achieved. Consideration may be given to extending your response time for good cause shown.

MAY 24 1985
