Attn: Glenda Jackson

Our U.S. NRC Materials License (#34-08740-02) covered gas chromatographic electron capture (Ni63) detectors. In July, 1995 this lab facility was closed and all analytical work stopped. All equipment, including the GC-ECD units were kept in storage until February 1996 and then sold. We disposed of the two remaining Ni63 detectors in March and applied for License termination April 24, 1996. The License was terminated May 20, 1996.

We are requesting a reduction of the annual license fee (\$1600) for the reasons that our licensed materials were in storage from July 1995 until March 1996 and our License was terminated five months before the end of the fee period.

Thank you for your consideration and please advise me of your decision as soon as possible.

Sincerely,

Carl Weaver
