\*Part time

Introduction

A meeting was held at Silver Spring, Maryland, on July 11, 1985, to discuss General Electric Company's (GE) proposed response to our letter dated April 17, 1985, concerning GE's application for the Model No. 2000 cask.

Discussion

Each question raised in our letter of April 17, 1985, was discussed in some detail. GE stated that a number of items had been considered previously but not reported in the application. Additional calculations need to be performed by GE in order to respond to our April 17 letter. The NRC staff objected to the structural model GE used (but did not report) in calculating lead slump.

GE indicated that they would submit a response to our April 17 letter within 90 days.
