Dear Mr. Bauer:

SUBJECT: LIMERICK GENERATING STATION, PROCESS CONTROL PROGRAM

In Section 11.4 of Supplement No. 3 to the SER, the NRC staff stated that it found that the Limerick process control program (PCP) is acceptable pending acceptance of the final PCP to be submitted after analysis of the results of the preoperational testing to validate the process controls. In a March 7, 1985 letter transmitting a revised PCP, the Philadelphia Electric Company stated that it had completed preoperational testing of the solid radwaste system, had verified the acceptability of the process parameters and had made changes to the PCP to reflect information gained by the testing.

The staff has reviewed the March 7, 1985 submittal and has found the revised PCP to be acceptable with respect to its use for processing solid waste accumulations at the plant. This approval is granted on an interim basis pending the results of generic work by the staff. The generic effort results are expected to be used in independent reviews of PCP's for all operating plants with respect to compliance with 10 CFR Part 61.

These findings will also be included in a forthcoming supplement to the SER.

Sincerely,

Walter R. Butler, Chief  
Licensing Branch No. 2  
Division of Licensing
