Gentlemen:

Submitted herewith is Dames & Moore's "Report, Characterization of Overburden, Mine Waste and Uranium Ore, For Reclamation Contract 1, Poison Basin Mine Site, Near Baggs, Wyoming". This report has incorporated additional laboratory testing results and the comments raised at the presentation on October 5th in Cheyenne.

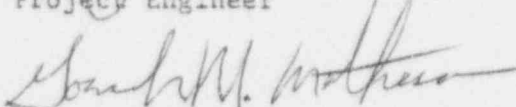

An addendum to this report is forthcoming. The addendum will describe the characteristics of the Murphy Overburden Dump, which was only partially sampled for this investigation, and will contain the flood routing study for the mill site reclamation. We anticipate this addendum will be issued approximately mid-November since sample analyses require at least 2 weeks to complete.

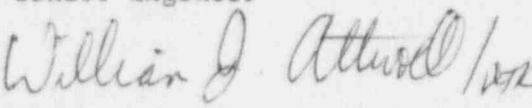

If you have any questions on the content of this report, please feel free to contact us.

Sincerely,

DAMES & MOORE

Mary L. Pearson
