

September 27, 1996

U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Attn: Document Control Desk

Subject: Dresden Nuclear Power Station Units 1, 2, and 3
Updated Radiological Environmental Evaluation of Dresden Site
NRC Docket Numbers 50-010, 237, and 249

The purpose of this letter is to provide an updated status of the Special Radiological Environmental Monitoring Program around the Dresden site. No sample in the special environmental sampling program has yielded positive results for gamma-emitting isotopes. All tritium sampling program results from the second quarter of 1996 are consistent with previously reported levels for tritium from the first quarter of 1996 and 1995.

Please direct any questions pertaining to the Special Radiological Environmental Sampling Program to Peter Hamby, Corporate Health Physics Support Department, at (708) 663-7652.

Sincerely,

David A. Sager
Generation Support Vice President
