B & B Dredging Corporation
ATTN: Mr. Hans B. Blomberg
Radiation Safety Officer
P. O. Box 819
Crystal River, Florida 34432-0819

SUBJECT: NRC INSPECTION REPORT NO. 09-30205-01/96-01

Dear Mr. Blomberg:

Thank you for your responses of September 10, 1996 and October 14, 1996, to our Notice of Violation, issued on August 22, 1996, concerning activities conducted under NRC License No. 09-30205-01. We have evaluated your responses and found that they meet the requirements of 10 CFR 2.201.

In the Notice of Violation issued on August 22, 1996, an incorrect date was documented within the Notice. Specifically, the violation states that between November 1984 and June 20, 1996, the on-off mechanism for the gauge was not tested. The violation should have indicated that between November 1995 and June 20, 1996, the on-off mechanism was not tested.

We will examine your corrective actions during a future inspection. Your cooperation in this matter is appreciated.

Sincerely,

(original signed by
C. M. Hosey

Re: Additional Reply to a notice of violation, License Number 09-30205-01, NRC Inspection Report No. 09-30205-01/96-01

Dear Sir or Madam:

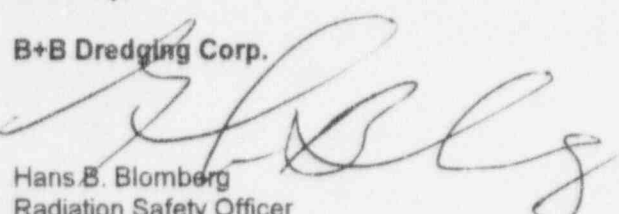

On September 10, 1996, B+B Dredging Corp. submitted a response to the NRC notice to violation dated August 22, 1996. Pursuant, we have received a notice dated October 4, 1996 indicating receipt of our response, and in addition we were contacted by Mr. Darrel G. Wiedeman of Region III regarding our response.

Mr. Wiedeman indicated an error was made regarding the date(s) of violation in the original violation notice and it appears this issue is resolved. Additionally, in regards to the testing of the on-off mechanism, we offer the following response. After further explanation of our violation by Mr. Wiedeman, we agree to the permit violation and immediate measures to assure full compliance have been made. B+B Dredging Corp. has established a shutter on-off mechanism test procedure whereby the mechanism is tested in intervals not to exceed six months. B+B will test the mechanism in accordance with NRC guidelines each time the gauge is turned off, which is estimated to be approximately four (4) times per year. This measure and procedure, to assure compliance, has been noted in our records and is available for review by the NRC upon request.

We anticipate the above corrective measure is sufficient in achieving full compliance of our materials license. If you have any further questions, please do not hesitate to contact us, so that this matter can be resolved in a satisfactory manner.

Sincerely,

B+B Dredging Corp.

Hans B. Blomberg
Radiation Safety Officer
