Mr. Harold R. Denton, Director
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Attention: Ms. E. G. Adensam, Chief
Licensing Branch No. 4

Subject: McGuire Nuclear Station
Docket Nos. 50-369 and 50-370
Technical Specifications for the Containment Isolation System

Dear Mr. Denton:

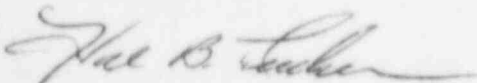

Attached are proposed license amendments to Facility Operating Licenses NPF-9 and NPF-17 for McGuire Nuclear Station Units 1 and 2, respectively. The proposed changes in the Technical Specifications are concerned with the Containment Isolation Systems (T.S. 3.6.3) and involve deleting valve NI-122B from Table 3.6-2 of the Technical Specifications. This valve has been determined to not require a containment isolation signal. Associated with this proposed change of Technical Specifications is a station modification which would remove the containment isolation signal to valve NI-122B. This valve is normally closed during operation.

Attachment I contains the proposed Technical Specification changes. Attachment II provides Justification and Safety Analysis in support of the proposed changes. Attachment III provides a determination that the proposed changes do not involve any significant hazards consideration, as defined by 10CFR 50.92.

This request involves one application for amendment to McGuire's Technical Specifications. Accordingly, pursuant to 10CFR 170.21, a check for \$150.00 is enclosed.

Please contact us if you require any additional information.

Very truly yours,

Hal B. Tucker

WHM/mjf
