Gentlemen:

This refers to a meeting held between members of our respective staffs on June 13, 1985 and your letter dated June 14, 1985 in which you formally requested further modification of the October 26, 1984 Order Modifying Licenses (Order).

The basis for this request is to ensure adequate and prompt medical attention to patients needing emergency nuclear medicine scans. After discussions with Nuclear Pharmacy, Inc. (NPI) and Hydro Nuclear Services (HNS) representatives concerning the proposed modification, our review of recent audit reports and our evaluation of your justification for the modification, I have determined, in accordance with Section V.E. of the Order, that good cause exists to further modify Section V.C.2 to relax the dual independent verification requirements for emergency (STAT) call-in orders during non-regular pharmacy hours. NPI and the audit reports have indicated that unnecessary delays have been encountered in the preparation and shipping of emergency (STAT) doses to hospitals during non-regular pharmacy hours because of the time required to have two qualified individuals report to the pharmacy.

Pursuant to the Order, the NRC hereby modifies the required conditions of Section V.C.2 for all affected Nuclear Pharmacy, Incorporated licenses as follows:

Section V.C.2 requires that two qualified individuals as described in your December 21, 1984 letter, at least one of whom is an authorized user, independently verify (1) the performance of all tests, assays, and surveys of NPI radiopharmaceutical products and product packages as required by the NRC license and (2) that accurate records of the results are prepared. The qualified individuals shall, by signature, note each verification and shall complete the verification prior to any material leaving the facility.
