*FOIA-85-265
Rec'd 4/12/85*

Dear Nita:

(FOIA-85-264) In furtherance of our discussion this date, I am enclosing a copy of a third FOIA Request sent out on April 9, 1985. As you can see, it deals at some length with the damper problem we discussed today. If need be, I would like to expand on the request to include a request for all Part 21 or 50-55(e) notices of problems with Ruskin dampers. I understand that there were several nuclear facilities affected by it.

With respect to any problem with Ruskin dampers at Palo Verde and Clinton Power Station, I would greatly appreciate it if I could obtain any and all NRC inspection reports of any "fix" done to the dampers at both sites, as I am interested in learning of how the problem was fixed and when the fix took place. Moreover, any internal NRC memo's, etc. discussing the Ruskin damper problem would be greatly appreciated.

Finally, I think you indicated that a similar request had been filed by an organization known as GAP. If possible, I would like a copy of their request so that I could contact them.

In closing, let me again thank you for your able assistance in this matter. It has been truly appreciated.

Very truly yours,
