RE: Additional Information Requested for Amendment to Registration for
Registry #NR-122-D-101-S

Dear Ms. Burgess:

This is the response to our phone conversation of September 20, 1996 for
additional information for the amendment to the above referenced
documents.

- In reference to question #2 of your letter dated September 17, 1996, we
verify that all fasteners used to assemble the source housing will be of
the "TORX with center pin" type. The holding ring for the cover film, the
collimator plate and the end plates will all use these tamper proof
fasteners. All other seams and joints of the source housing are welded.

If you have any questions please contact me.

Sincerely,

Ray Santoianni
Service Manager
