Re: Nine Mile Point - Unit 2
Docket No. 50-410

Dear Mr. Starostecki:

Enclosed is a supplement to our interim report sent to you under cover letter dated December 20, 1984, in accordance with 10CFR50.55(e) for the problem concerning the control of spare/replacement parts. This problem was reported via tel-con to W. Lazarus of your staff on November 20, 1984.

Very truly yours,

C. V. Mangan
Senior Vice President

CVM/GG/c1a
(1204H)

NIAGARA MOHAWK POWER CORPORATION
NINE MILE POINT - UNIT 2
DOCKET NO. 50-410

Supplement Interim Report for a Problem
Concerning Control of Spare/Replacement Parts
(55(e)-84-53)

Description of the Problem

An inspection by the Institute of Nuclear Power Operations identified a concern regarding the control of spare/replacement parts at Nine Mile Point - Unit 2. The concern may be classified into the following categories:

1. Control of parts/documentation after issuance from the warehouse
2. Control of parts with expired shelf life
3. Identification of parts
4. Segregation of parts with different Quality Assurance categories

A revision was made to project procedure CSI 20.17, Control of Permanent Plant Spare and Replacement Parts, and Project Procedure 126, Shelf Life Evaluation and Control was established. We feel these changes adequately address the concerns expressed by INPO.

At this time, we are investigating the disposition and use of spare parts prior to our procedural changes, to see if any deficiencies exist that could adversely affect the safe operation of the plant. A final report based on this investigation will be submitted by January 16, 1986.
