

Citizens Regulatory Commission
Steering Committee
180 Great Neck Road
Waterford, CT. 06385

October 9, 1996

Dr. Shirley Ann Jackson
Chairman
U.S. Nuclear Regulatory Commission
Washington, D. C. 20555-0001

Dear Dr. Jackson:

The Citizens Regulatory Commission (CRC) formed to represent the interests of the communities surrounding the Millstone Nuclear Power Complex. Our interest is to ensure the safe operation of these plants. Many in our group have lived in the surrounding communities for years. Deep concern was stimulated by the Millstone whistle-blowers and the media regarding public safety issues. Our worst fears seem to be coming true on a daily basis. We are left with no advocate for the public at these plants, as they have all been removed through settlement agreements with Northeast Utilities (NU), or by inaction on the part of the Nuclear Regulatory Commission (NRC) with regard to employee protection provisions.

The purpose of this letter is to make proposals to the NRC regarding your admitted need for an independent review to verify the adequacy of the licensee's efforts. We would like to go further, and address a number of issues we believe are necessary to foster trust and fairness into the current Independent Corrective Action Verification Plan (ICAVP).

Having NU pick the ICAVP team, and having the NRC approve the team isn't sitting too well with the general public. This was evidenced by the petitions submitted to your staff at a recent ICAVP informational meeting. Additionally, having your ~~staff pick among the systems to be picked by~~ the ICAVP to look at, and to determine the ~~adequacy of the licensee's efforts~~, does not comfort us too well based on past NRC practices with confidentiality issues. Also, Unit # 3 has about 222 systems, 143 of which NU does not intend any System Specific Assessments. It only plans an FSAR update, and an engineering programs review. NU will do System Specific Assessments on about 80 systems, and of that, a very small amount (We understand approx. 6) will be designated for an ICAVP review by the NRC. This doesn't look to us like much of a review to verify the adequacy of the licensee's efforts.

~~One concern is that any one team selected by the NRC or by NU will have a bias~~ and that bias being in favor of the nuclear industry. If a vendor such as Sergeant & Lundy is selected, the people employed by this contractor will have an allegiance to their management and will do whatever management wants. No matter what safeguards are in place, or what types of nuclear concerns programs are used, ~~there will always be the inherent bias to ensure the nuclear industry survives. There is a natural bias by almost anyone working within the nuclear industry.~~

We would like to propose an independent selection team called People for Responsible Oversight Verification (PROV). The team would be composed of nine (9) members. Two selected by the CRC, two from, or selected by the Connecticut Nuclear Energy Advisory Council (NEAC), two from, or selected by the NRC, two from or selected by NU, and one from academia (Yale, MIT, Harvard etc.). The eight (8) individuals selected by the CRC, NU, NEAC, and NRC would select the ninth member from academia through a mutually agreeable process.

Members from NU and the CRC on the NEAC would not be allowed to serve on the PROV. NRC members shall have had no prior connection to Millstone, or NU. The members of the PROV team would determine the selection criteria for establishing the ICAVP. It would take a 2/3 majority (6 members agreeing) of PROV to approve any criteria. The ICAVP would be paid through the NRC via its normal contractor billing arrangement, or through the normal billing process the NRC utilizes to recover oversight costs from all utilities.

Because of concerns about the history of programmatic weakness, the failure to require the implementation of effective corrective actions, the failure to require and maintain a safety-conscious environment supporting licensee employees, and failure to properly enforce it's own requirements, the NRC finds itself in a position that lacks credibility with the public.

In order to restore the public trust and a sense of integrity to the NRC, we are recommending that, you Chairman Jackson, appoint a Special Oversight Team for Millstone Station. The Team should consist of the necessary managers and staff to adequately oversee all the programs, and areas not being verified by the ICAVP. The NRC Special Oversight Team should have the same criteria imposed on it, as that required of the ICAVP.

The Commission should establish the areas to be looked at, level of review of the team, and the acceptance criteria. Based on past restart weaknesses at Unit #2, by previous NRC oversight teams, we must insist on a complete overhaul of the current oversight system. The organizational chain for the Special Oversight Team should be changed to delete any NRC management previously involved in oversight at Millstone, including EDO, NRR, Enforcement, and Regional managers and staff, involved in allowing such poor oversight to occur.

As we pointed out earlier Dr. Jackson, we are very concerned about the fairness of the current proposal. Public trust has been damaged substantially, and the credibility of the NRC and the whole nuclear industry is at stake. We expect a fair and valid system of verification. The current system is neither.

Sincerely,

David Brinkley

We the undersigned believe that Northeast Utilities should not be the selector of the independent verification team on whose approval the Nuclear Regulatory Commission has mandated as a necessary step prior to the start up of the Millstone Units. As residents of the localities which adjoin the Millstone Power Station, we seriously question the independence of any group which is selected and paid for by the same utility on whom they are supposed to be performing an objective assessment and evaluation. We urge the Nuclear Regulatory Commission to rescind this decision and remove Northeast Utilities from any involvement in the selection of the start up verification team.

We the undersigned, believe that Northeast Utilities should not be the selector of the independent verification team on whose approval the Nuclear Regulatory Commission has mandated as a necessary step prior to the start up of the Millstone Units. As residents of the localities which adjoin the Millstone Power Station, we seriously question the independence of any group which is selected and paid for by the same utility on whom they are supposed to be performing an objective assessment and evaluation. We urge the Nuclear Regulatory Commission to rescind this decision and remove Northeast Utilities from any involvement in the selection of the start up verification team.
