Dear Dr. Adam:

Reference: License No. 34-13011-04  
Control No. 15630

This is in response to your letter received 2 April 1985 regarding the renewal of the NRC license referenced above. A number of these points are covered by the MCO Radiation Safety Manual (RSM), enclosed. Note that this document covers both medical and non-human use of radioactive materials at our institution. We currently hold NRC License No. 34-13011-05 covering non-human use, as well as the human use License No. 34-13011-04. Both licenses are currently under review for renewal.

It would seem simpler if these two licenses could be combined, as our program integrates all uses of radioactive materials. It is sometimes unclear to our suppliers and others which license we are operating under. Combining the licenses would also reduce the redundancies associated with renewals and amendments. Please advise how the consolidation might be accomplished.

Responses to specific items are as follows:
