Docketing & Service Branch
Secretary of the Commission
U.S. Nuclear Regulatory Commission
Washington D.C. 20555

Dear Sir or Madam:

I am writing regarding the public comment period set for NUREG-0956, "Reassessment of the Technical Basis for Estimating Source Term." I am requesting an extension to this comment period from 90 days to 180, thereby extending the comment time to February 7, 1986.

I make this request based on the following reasons. For those of us not based in Washington it often takes several weeks to become aware of, request and receive such documents. Also, given the highly technical nature of this document a careful study of the document may take some time especially for those members of the public who work in other fields.

Given the major impact NUREG-0956 may play it seems only fair that the NRC allow an adequate time for public comment.

Sincerely,

Paul D. Eineke
