

CALIFORNIA POLYTECHNIC STATE UNIVERSITYDOCKET NO. 50-394ORDER TERMINATING FACILITY LICENSE

By application dated April 30, 1981, as supplemented by letter dated September 8, 1981, California Polytechnic State University (the licensee) requested authorization to dismantle the AGN-201 Training Reactor (the facility), a research reactor located on the campus in San Luis Obispo, California, and to dispose of the component parts in accordance with the plan submitted as part of the application, and to terminate Facility Operating License No. R-121. A "Notice of Proposed Issuance of Orders Authorizing Dismantling of Facility, Disposition of Components Parts, and Termination of Facility License" was published in the FEDERAL REGISTER on June 26, 1981 (46 FR 33148). No request for hearing or petition for leave to intervene was filed following notice of the proposed action. By Order dated October 6, 1981 the Commission authorized dismantling of the facility and disposal of component parts as proposed in the licensee's dismantling plan.

By letter dated January 30, 1985, the licensee indicated compliance with the dismantling and disposal plan and requested termination of the Facility Operating License No. R-121. The facility area has been inspected by a Nuclear Regulatory Commission Region V inspector. The inspection and radiation surveys confirm disposal of component parts in accordance with licensee's dismantling plan, that radiation levels meet the values defined in the dismantling plan, and that the area is, therefore, available for unrestricted access.

Accordingly, the Commission has found that the facility has been dismantled and decontaminated pursuant to the Commission's Order dated October 6, 1981. Satisfactory disposition has been made of the component

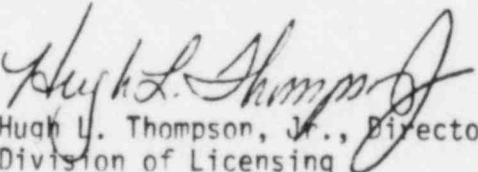

parts and fuel in accordance with the Commission's regulations in 10 CFR Chapter I, and in a manner not inimical to the common defense and security, or to the health and safety of the public. In accordance with 10 CFR Part 51, the Commission has determined that the issuance of this termination Order will have no significant impact. The Finding of No Significant Environmental Impact was published in the FEDERAL REGISTER on July 17, 1985 (50 FR 29005).

For further details with respect to this action, see (1) the application for authorization to dismantle the facility and dispose of component parts and for termination of facility operating license dated April 30, 1981, as supplemented September 8, 1981 and January 30, 1985, (2) the Commission's Order Authorizing Dismantling of Facility and Disposition of Component Parts, dated October 6, 1981, and (3) the Commission's related Safety Evaluation, dated July 19, 1985. Each of these items is available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Licensing.

This termination Order is effective as of its date of issuance.

Dated at Bethesda, Maryland, this 19th of July 1985.

FOR THE NUCLEAR REGULATORY COMMISSION

  
Hugh L. Thompson, Jr., Director  
Division of Licensing
