ISI Code Year Update

Gentlemen:

Our present ASME XI Inservice Inspection Program is based on the 1974 Edition through the Summer 1975 Addenda of the ASME Boiler and Pressure Vessel Code. In accordance with the provisions of 10 CFR 50.55a(g)(iv), it is requested that the NRC approve use of portions of the 1980 Edition through the Winter 1981 Addenda as they apply to the Hydrostatic and System Leakage portions of the Beaver Valley Ten Year Plan.

This requested Code update will invoke all the requirements and rules of sub-sections IWA-5000, IWB-5000, IWC-5000 and IWD-5000 in lieu of the requirements of the same sub-sections of the 1974 Edition through the 1975 Summer Addenda. This change will allow for a more concise description of the ISI program and will permit more effective and efficient testing of the Class 1, 2 and 3 components which are subject to examination.

It is our intent to implement portions of the later version of the Code in time to support ISI work scheduled for our fifth refueling outage presently scheduled to begin in May of 1986. Therefore, your timely review and approval of this request is needed to assure adequate planning for our upcoming refueling outage.

A check in the amount of \$150.00 is attached in accordance with 10CFR170 as payment of the application fee for our request to use later portions of the ASME XI Code.

If you have any questions, please contact me or members of my staff.

Very truly yours,

J. D. Sieber
