Director of Nuclear Reactor Regulation
Attention: Mr. B. J. Youngblood, Chief
Licensing Branch No. 1
Division of Licensing
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Youngblood:

- Reference: (1) Fermi 2
NRC Docket No. 50-341
NRC Operating License No. NPF-43
- (2) Detroit Edison Letter to NRC, "Additional
Information Regarding Fermi 2 Leakage
Reduction Program", NE-85-0391, dated
June 3, 1985

Subject: Leakage Reduction Test Results (T48-Q4)

Detroit Edison committed to provide advance copies of leakage test results and associated descriptions of preventive/corrective maintenance performed on systems enveloped by NUREG-0737, Item III.D.1.1, in Reference (2). As reflected in Reference (2), these test results are to be submitted as they become available. In accordance with this commitment, the leakage reduction program results for the Post-LOCA Thermal Recombiner System are enclosed for your information. The report indicates that corrective maintenance was performed to reduce the leakage measured in the initial test to acceptable levels prior to the final test. The maintenance performed was limited to routine measures such as the tightening of packing and tubing connections. Future submittals of leakage test results will specifically delineate significant maintenance activities (e.g., component teardown, rework and/or replacement) should they be required to meet system leakage acceptance criteria.
