Dear Ms. Hamel:

Enclosed for your information is a copy of preliminary results from our recent sampling at the Sheffield low-level radioactive waste disposal site. This report covers the application of EPA's proposed Method 8600 for organic constituent screening. These preliminary results appear consistent with prior sampling at the site. I had not sent this report previously because, as you can see, it does not contain results for specific organic constituents which is our primary interest. I plan to forward further results to you as they are received and reviewed.

As per our discussions of April 10 and 11, 1985, I look forward to receiving a copy of the draft closure plan (including cover design) for the Sheffield site as soon as possible. It would also be very helpful if you could estimate the schedule for future licensing activities for the site. Please call me if you have any questions about the preliminary sampling results or other matters.

Sincerely,

Original Signed By

Dan Goode
Geotechnical Branch
Division of Waste Management, NMSS
