EXECUTIVE SUMMARY

Dresden Nuclear Power Plant, Units 1, 2, and 3

NRC Inspection Report Nos. 50-10-96011; 50-237-96011; 50-249-96011

This inspection included a review of aspects of your plant support activities in the area of physical security. The report covers our review of your vehicle protection system, which was conducted on July 31, 1996, and routine review of your physical security program, which was conducted on August 5-9, 1996.

Plant Support

- Security program performance, in the areas reviewed, provided the required level of protection to the site. Implementation practices by the security organization were generally effective and conducted in a professional manner.
- The inspector identified the following violations: (1) a portion of a vehicle barrier was ineffective (Section S.1.b.(1)); (2) an individual granted unescorted access was not properly screened (Section S.1.2.b.(1)); and (3) some material delivered in to the protected area was not adequately controlled (Section S.1.2.b.(2)).
