

SSER

Task: Allegation A-64; A-65; A-66

Reference No.: 4-83-A-88/16, 17, and 18

Characterization: The allegation is that Ebasco site letters F-63724E, F-618958 and F-61147E imply that Mercury inspection activities may be unacceptable.

Assessment of Allegation: The implied significance of this allegation is that unacceptable inspections by Mercury could have permitted invalid installations to have gone undetected.

The NRC staff reviewed the letters identified in this allegation. The staff also reviewed Mercury letter WA-2065, February 25, 1983; Ebasco letter F-61120E, January 13, 1983; Mercury letter WA-2014, December 21, 1983. The numerous solutions called for in these documents were implemented, and resulted in the issuance of approximately 100 nonconformance reports (NCR) and discrepancy notices (DN). As a result of the reinspections required by the above letters, and the issuance of two Significant Construction Deficiencies (SCDs), SCD-57 and SCD-84. The staff concludes that sufficient inspection was performed.

The NRC staff concludes that Ebasco identified the problem that Mercury lacked sufficient implementation of the quality assurance program and Ebasco has performed the necessary inspections and additional work to bring the Mercury installation work up to an acceptable level. This allegation therefore has neither safety significance nor generic implications.

[Potential Violations: None.]

Actions Required: None.
