Task: Allegation A-177

Reference No.: 4-84-A-06-72

Characterization: It is alleged that an EBASCO quality assurance (QA) inspector did not exercise proper judgment and may not be doing his job honestly while dispositioning nonconformance reports (NCRs) concerning American Bridge Company steel construction work.

Assessment of Allegation: The allegation has no safety significance since all American Bridge Company (AB) work had been re-inspected after the allegation was made, resulting in discrepancy notices (DNs), two NCRs, and appropriate corrective measures for the work in question. The alleged also stated that he no longer has any concern over AB work. The NRC staff also had no questions as a result of a review of the two NCRs addressing this subject.

The integrity of the EBASCO inspector's work is being addressed by the NRC Office of Investigations (OI), which is currently investigating this matter.

The NRC staff is satisfied from its review of the NCRs that the safety issues related to AB have been properly addressed. The possible generic implications for other technical matters resolved by EBASCO QA personnel whose integrity is in question is contingent on the results of investigations being performed by OI. Further technical evaluations may be necessary depending on the outcome of these investigations.

[Potential Violations: None.]

Actions Required: None.
