Radiation Machinery Corporation  
1280 Route 46  
Parsippany, New Jersey 07054

Attention: Mr. E. T. O'Sullivan  
Executive Vice President

Gentlemen:

In support of your application dated August 29, 1968, for amendment of your License No. 29-12649-01, please:

- a. Specify the training and experience criteria your Isotope Committee will follow in determining whether or not an individual is qualified to use the byproduct material.
- b. Clarify the frequency at which your Isotope Committee will meet. We did not understand the general wording of the phrase, "on a regular basis," in your application.
- c. Identify the address number at which your leased warehouse facility on Parsippany Road is located.

If your company should desire to increase the present scope of its license at some future date, then additional information should be submitted in support of such expanded activities. This would include a description of the new operations, a description of the facilities and equipment involved, establishment of the safety instructions that will be followed under your radiation protection program, establishment of the administrative procedures for carrying out your operating program, and formulation of appropriate emergency procedures. We are enclosing a copy of our Irradiator Licensing Guide which outlines categorically the types of information we would be interested in re-

- 2 -

garding irradiator operations. We would additionally foresee the need for a full-time health physics officer in charge of the expanded operations.

Sincerely,

Frank C. Davis  
Isotopes Branch  
Division of Materials
