10 CFR 19, 20, 21, 30, 39, 40, 51, 70, 71, and 150

Licenses and Radiation Safety Requirements for Well-Logging Operations

OFFICE OF SECRETARY  
DOCKETING & SERVICE  
BRANCH

AGENCY: Nuclear Regulatory Commission.

ACTION: Proposed rule: Extension of comment period.

SUMMARY: On April 8, 1985 (50 FR 13797), the Nuclear Regulatory Commission published for public comment a proposed rule that would specify radiation safety requirements for the use of licensed material in well-logging operations. The proposed amendments would provide comprehensive and consistent regulations, uniform safety requirements, and safety requirements designed to reduce the risks of accidents. Several coal and mineral mining companies commented that they may be substantially affected by this rulemaking and have requested additional time to comment on the proposed rule. Although these companies are not NRC licensees, they hire NRC licensees to perform well-logging operations and, therefore, the proposed rule could affect their interests. In order for the NRC to fully evaluate the issues raised by these commenters, we are extending the original comment period, which expired on July 8, 1985, for 90 days to allow these companies, and other interested parties, to further consider the proposed rule and provide comments.

DATE: The extended comment period expires October 9, 1985. Comments received after the date will be considered if it is practical to do so, but assurance of consideration cannot be given except as to comments received on or before that date.
