Docket No. 50-320

GPU Nuclear Corporation

ATTN: Mr. F. R. Standerfer

Vice President/Director, TMI-2

P. O. Box 480

Middletown, PA 17057

Dear Mr. Standerfer:

Subject: Seismic Design Criteria

Reference: Letter from F. R. Standerfer, 4410-85-L-0077, to B. J. Snyder,
dated April 16, 1985

The referenced letter requested NRC review of the applicability of seismic design requirements to TMI-2 post accident systems.

In order to complete our review and evaluation we will require additional information. The following questions are listed by the section in your safety evaluation which they refer to.

3.1.1.3 (1)

- a. The referenced samples were from the core debris bed in the upper portion of the core. Do you consider this sample to be limiting and/or to be representative of all the core zones?
- b. You indicate that only 1.5% of the material is less than 45um. Since particles larger than 45um (perhaps up to 100um) can be pyrophoric what percentage of the core region is in this particle size range?
- c. Since portions of your detailed defueling strategy are not finalized how will you assure that these activities will not "generate significant additional quantities of fines in the size range of concern"? Such activities may include, plasma arc cutting, mechanical breaking of the suspected fused zone and core boring.

3.1.2.10 What is the basis for the maximum inventory in the waste storage area? Is this controlled in some manner, i.e., by procedure?
