799 Roosevelt Road
Glen Ellyn, Illinois 60137

Attention: Dr. Adam

Gentlemen:

IRECO is presently using an Ohmart Densart 3000 gage at our Pelican Point, Lehi, Utah explosives manufacturing site. We use this gage with its 100 mCi source to continuously monitor the density and percent solids of our explosives products as they are being manufactured.

We presently have a specific license from the State of Utah, Bureau of Radiation Control, License #UT 1800173. We would like to ship our Ohmart nuclear density gage to our Kingsbury, Indiana plant as soon as possible. We are, therefore, applying for an NRC license through your region and request that you act on our application immediately.

Enclosed please find our check for \$110.00. Your prompt attention to this matter would be greatly appreciated.

Sincerely

Reiner Lenzen
R.P.O.
