United States Nuclear Regulatory Commission
Material Licensing Branch
Division of Fuel Cycle and Material Safety
Washington, DC 20555

SUBJECT: Renewal of By-product Material License # 20-13135-02

Gentlemen:

As per the instructions in your notice of expiration dated September 1, 1983, we have reviewed our license with its conditions (license #20-13135-02 dated November 16, 1978, application dated March 23, 1978) and the supporting documents (our letter dated September 23, 1978) as well as our present material management and radiation safety program.

We have found that the above-mentioned documents do still accurately represent our actual program, with one change. Because Dr. E.V. Sayre is not a regular staff member of the Research Laboratory of the Museum of Fine Arts anymore, we would like to see condition #12 of the license amended as to read: "Only persons specifically authorized and trained by Dr. L. van Zelst, radiation protection officer, will be allowed to handle the sources listed on this license, under his supervision."

We respectfully request a renewal of our license on the same conditions as the one about to expire, with the above suggested amendment. We will continue to operate in accordance with the license conditions and the supporting documents submitted for the previous application and referred to above.

For further information regarding this application please contact: Dr. L. van Zelst
