Reading, Pennsylvania 19611-052

Gentlemen:

This is in reference to your request in a letter dated April 16, 1985 to amend License No. 37-20769-01. In order to continue our review, we need the following additional information:

1. Please submit verification that training by the device manufacture has been obtained by those who will use and or supervise the use of the devices. As a minimum the individual responsible for your radiation safety program, should have completed the device manufacturer's training program or equivalent training.
2. In order to perform cleaning of the Troxler device which involves removal of the source rod you must obtain a calibrated and operable survey meter that can measure at least 1 through 200 milliroentgens per hour. Please submit the manufacturer's name and model number of the survey meter you will be using and your method for annual re-calibration.
3. Please verify that the individual who will clean the Troxler device and removes the source rod has been trained in this procedure and the use of a radiation survey meter.
4. The recommended exchange frequency for film badges should be at intervals not to exceed one month and the exchange frequency for TLDs should not exceed three months. Please identify the type of monitoring device you will be using and confirm that the exchange frequency agrees with the recommended frequency.
